

# Security at careviso

---

Trust and  
Confidence  
that Your  
Patients' PHI  
is Protected

We take security seriously at careviso and have a system in place to ensure our clients' personal information stays safe. careviso has a Business Associate Agreement (BAA) in place with all laboratories and physician offices. We have also received a SOC 2<sup>®</sup> report from an independent auditor as of 2021.

Information is safeguarded through annual risk assessments, SOC 2<sup>®</sup> examinations, penetration testing, and vulnerability scanning. These are all conducted externally (reports and reviews available upon request with our partners).

BAAs allow careviso to act on behalf of offices to perform necessary prior authorization services.

Our systems and controls met SOC 2<sup>®</sup> criteria based on security, privacy, process, integrity, confidentiality, and availability.

All careviso staff are screened and receive thorough annual security and HIPAA training.
