

Creating streamlined solutions for patient access within the diagnostic testing community since 2017.

What began with prior authorization processing has evolved into a personalized platform that includes automations for **benefits eligibility** and **price transparency in real-time**.

Method

We use multiple eligibility vendors, build datasets of standard medical codes, leverage pricing, and configure prior authorization requirements all in a single platform: seeQer.

seeQer accurately identifies coverage and benefits, and standardizes the configuration of pricing, coverage, and PA requirements. It also streamlines the PA process while maintaining or increasing current PA volume, and calculates patient cost in real-time.
