

Creating streamlined solutions for patient access within the diagnostic testing community since 2017.

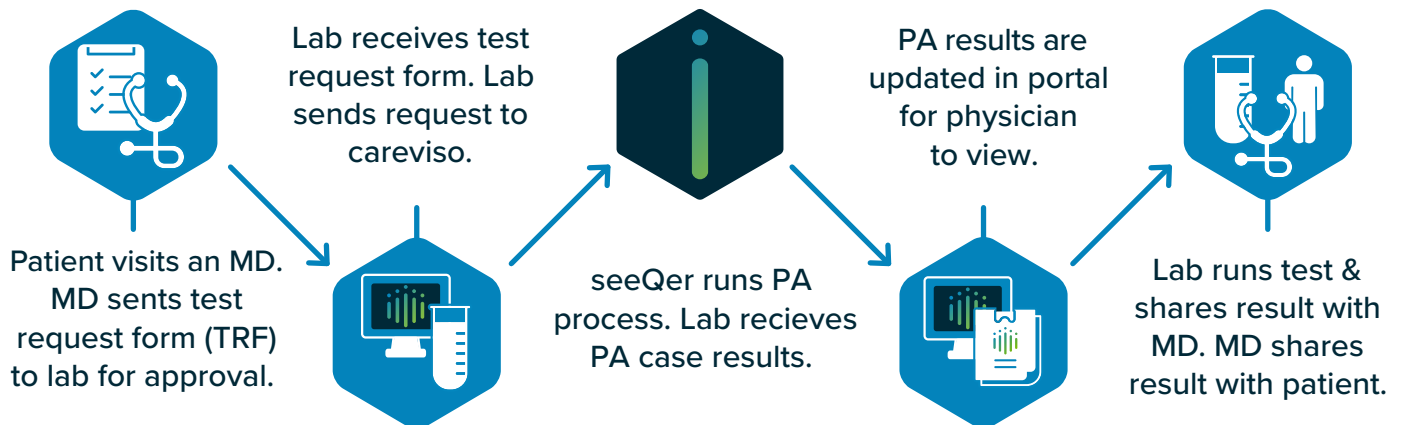

What began with prior authorization processing has evolved into a unique, **personalized platform** that is the next step in helping patients access **diagnostic testing**.

Method

We use multiple eligibility vendors, build datasets of standard medical codes, leverage pricing, and configure prior authorization requirements all in a single platform: seeQer.

Our proprietary platform has been built over the course of 3 years and each iteration takes into account the evolving complexities of healthcare.

seeQer offers visibility to the cases careviso is processing; physicians and staff can see clinical data all in one view and in real-time. seeQer is easy to access and consistently updated, decreasing administrative tasks for the physician office.
